Future POS®

developed by Cutting Edge Solutions

Mission Statement:

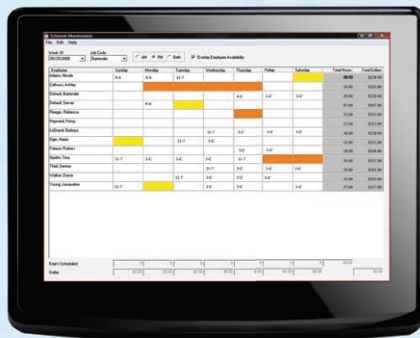

We are firmly committed to provide our Point of Sale customers with the highest quality software available. We also pride ourselves on leading the industry in innovation, by constantly integrating the latest technologies to improve our product. Lastly, we strive to bring this to our customers at a price that can't be matched in value.

Great features at your fingertips

Multi-Column Modifiers

Reduce ordering time with our fast, simple, and customizable multi-column modifiers. Every option for an item can be found in one modifier window. No need to click from screen to screen or search for buttons on different menus!

Labor Scheduling

The advanced Labor Scheduling feature allows management to schedule staff for multiple jobs by pay period. You can schedule an employee's shift, enter their vacations, and record days off. Graphical colored bars show when employees are not available for shifts. Schedules can be printed in the office and posted by job code, making it very easy to see everyone's shifts. Employees can also print their own schedule from any POS terminal to the local receipt printer. Hours and gross pay are accumulated so management can forecast what the labor cost will be for that scheduled period.

You need it customized?

Start with a blank sheet of paper, then draw out how you want your screens designed. Future POS is that flexible! Notice each screen layout pictured here is different, because the order entry screen is totally flexible and configurable to your needs. Your menu screen can be programmed to generate the most efficient layout for your type of business, as well as reduce server training time. Screens can be created for different staff (bartenders, servers, managers), while buttons can be created in various sizes, colors, fonts, with logos, graphics bitmaps or plain text.

Future POS software fits any restaurant application from fine dining, casual, pizza delivery, quick service, pool hall, cafeteria, and more. We strongly urge you to compare our ability to customize menus with the competition.

Powerful Microsoft SQL Database

The latest edition of Future POS, Future Fusion, now runs on a Microsoft SQL™ database! Previously you had to decide between using a product that had lots of features but ran on a proprietary database, or a product that uses Microsoft SQL™ but has limited functionality. With the release of Future Fusion, restaurateurs and developers will finally have the best of both worlds. One of the goals of Future Fusion was to take Future POS to the next level by combining all of the functionality of Future POS with a fast and reliable database in order to give users complete access to their data. Microsoft SQL™ is the industry standard therefore integration to third party applications is easier than ever! Future Fusion still has all of the great features and reliability that you came to expect from previous versions of Future POS, plus that ability to really make the software work for you thanks to Microsoft SQL™.

Menu Maintenance:

Menu Maintenance gives the user the ability to manipulate their menu in an unprecedented Graphical User Interface. We utilize the latest Microsoft technologies to bring you a product that is unparalleled in ease of use, as well as overall look and feel. While other products are patching together decades old technology and pretending it's new, Future POS is reinvesting and reinventing its products constantly, giving you a modern user interface that was built using current technology – not something that's antiquated.

Innovative Options

Future POS & Handhelds

Wireless table side ordering is available with Future POS Handhelds. Some estimates have shown that servers spend 10% of their time walking to POS terminals and waiting in line. Credit card transactions can be authorized with a snap-on swipe, and authorization slips can be printed on a wireless "belt" printer. This will help keep staff table side, engaging customers, selling additional items instead of spending time walking back to a POS terminal.

Online Ordering

We offer your restaurant customers the ability to order from their home or office computer. The orders are then securely registered in your store's POS System and sent to your kitchen printer to be packaged for deliver, take out, or curbside pickup. Increase "To Go" sales and decrease the labor it currently takes to manually handle your phone-in or faxed orders.

Surveillance

Protect your business from fraud and theft by using Future pos's built in Surveillance Module and ordinary web cameras. Future POS can monitor your business with event-driven video and real time surveillance plus writing a log file of all your video activity for your records.

Fingerprint Identification

Fingerprint Identification provides a lock-tight security measure for signing on to a terminal, clocking in and out, performing voids, etc. This completely eliminates "buddy punching", and will also make sure only managers have access to manager functions.

Enterprise / above store reporting

Future POS offers you the power to control multiple business locations from a single site with our Enterprise software. Future POS Enterprise gives you the capability to analyze and share resources for various businesses from a central location. Stores using Enterprise can share customer information, gift certificates, sale information, items, buttons, menus, and more. Enterprise also provides centralized reporting, updating, and administration. In addition to the functionality provided by our enterprise, Future POS also is interfaced to WhenToManage, giving even more above store reporting capabilities.

TabbedOut

The first to include smartphone technology! We teamed up with ATX Innovation to offer a new exciting and secure way to open, review and close tabs at your favorite hot spots right from your phone!

Why live in the past when the Future is here...

Digital Signage

Future POS's "Award Winning" Digital Signage module is included **FREE OF CHARGE**, and will do things that you would expect from a Digital Signage system that would typically cost a restaurateur several thousand dollars.

The Digital Signage Module brings you state of the art technology including:

Scheduled Content

- * Display advertisements, specials, movies and more!
- * Content can be scheduled in a customized playlist to run monthly, weekly, or daily
- * Uses popular file formats such as .JPG, .PNG, .MPEG4, or .SWF

Scoreboard Output

- * Rear facing displays or outside drive-thru displays
- * HTML based screens to create customized layouts
- * Real time output of sale information

Digital Menuboard

- * Features "Live" Menu updates from Future POS
- * HTML based screens to create customized layouts

End to End Encryption and Tokenization

Future POS is proud to announce it has incorporated End-to-End Encryption and Tokenization for Credit Card processing. By using MagTek's encrypted Magnetic Card Reader and Mercury Payment Systems for credit card processing, a merchant can completely protect themselves from having a Point of Sale related credit card security breach. All of the credit card data is encrypted as it's swiped through the MagTek MSR, and it is only readable by the credit card processing servers at Mercury Payment Systems. The POS system never has access to any sensitive cardholder data, so there is no way for it to be stolen. According to John Giles, President and CEO of Future POS, "Removing a merchant from the scope of PCI gives them piece of mind. Instead of worrying about a PCI audit and Visa/MasterCard fines in the hundreds of thousands, owners and managers can focus on running their businesses, which is especially important in a hospitality industry that is more competitive than ever."
